## Chapter 1:

# Introduction

This section introduces CyberLink YouCam and its latest features. It also outlines the available versions and reviews the minimum system requirements for the program.

---

***Note:** this document is for reference and informational use only. Its content and the corresponding program are subject to change without notice. Please go to <http://www.cyberlink.com> for additional information and product support.*

---

## Welcome

Welcome to the CyberLink family of software programs. CyberLink YouCam is a creative little program that provides you with some fun and interesting effects for your webcam. It also includes some useful features and add-ons that will help you get the most out of your webcam.

## Latest Features

This section outlines the latest features within the CyberLink YouCam program.

### Panoramas\*

- Create panorama images with your webcam.

### Face Tagging\*

- Tag the faces in your captured webcam photos.

### HDR Effect\*

- Apply an HDR effect instantly to photos taken with your webcam.

### Edit Photos\*

- Crop photo snapshots in the Edit window, or liven them up by adding color preset effects, frames, or by drawing on them.

### YouCam Launcher

- Access all the features of CyberLink YouCam quickly from one convenient

location.

### YouCam Media Library

- Browse through a library of the photos and videos you captured with your webcam in a calendar view, or by the faces\* tagged in the photos.

### Full Screen Capture Mode\*

- Use all of CyberLink YouCam's capture and effect features in a full screen mode that's optimized for touch screens.

---

*Note: \* this feature is not available in some versions of CyberLink YouCam.*

---

## YouCam Versions

The features that are available in CyberLink YouCam are completely dependent on the version you have installed on your computer.

To determine the version of CyberLink YouCam you are using, click on the **YouCam** logo on the title bar, and then select **About**.

## Updating Your Software

Software upgrades and updates (patches) are periodically available from CyberLink. CyberLink YouCam automatically prompts you when either is available.

---

*Note: you must connect to the Internet to use this feature.*

---

To update your software, do this:

1. Open the Upgrade Information window by doing one of the following:
  - click the  button on the YouCam title bar.
  - click the **Upgrade** button in the About window.
2. Click the feature you would like to upgrade to, or the patch you want to update with.
3. A web browser window opens, where you can purchase product upgrades or download the latest patch update.

## DirectorZone

You can enhance your version of CyberLink YouCam by downloading more visual effects\* from DirectorZone.

---

**Note:** \*this feature is not available in some versions of CyberLink YouCam.

---

DirectorZone is a free web service that lets you search for, download, and import additional effects into CyberLink YouCam. You can also upload custom avatars you create to DirectorZone, or share the details of the effects you used in captured videos uploaded to YouTube.

Go to [DirectorZone Settings](#) to sign in, or directly to the DirectorZone web site ( [www.directorzone.com](http://www.directorzone.com) ) to view more information on the available features and benefits.

## System Requirements

The system requirements listed below are recommended as minimums for running CyberLink YouCam.

Minimum System Requirements	
<b>OS</b>	<ul style="list-style-type: none"> <li>Microsoft Windows 8, Windows 7, Vista and XP 32-bit SP3 (Windows XP Service Pack 3 is required).</li> </ul>
<b>Memory</b>	<ul style="list-style-type: none"> <li>1 GB (2 GB recommended).</li> </ul>
<b>CPU</b>	<ul style="list-style-type: none"> <li>Intel Pentium D 3.0 GHz.</li> <li>AMD Athlon 64 3200+ or above.</li> </ul>
<b>HDD Space</b>	<ul style="list-style-type: none"> <li>1 GB required.</li> </ul>
<b>VGA Card</b>	<ul style="list-style-type: none"> <li>Intel 945 (Independent graphics card recommended).</li> </ul>
<b>Screen Resolution</b>	<ul style="list-style-type: none"> <li>1024x768.</li> </ul>
<b>Device</b>	<ul style="list-style-type: none"> <li>Webcam (built-in or external USB).</li> </ul>
<b>Other Software</b>	<ul style="list-style-type: none"> <li>Instant messaging software with video communication functions, such as Skype, Yahoo Messenger, AOL Instant Messenger.</li> </ul>

## CyberLink YouCam

	<ul style="list-style-type: none"><li>• Windows Internet Explorer 7 or above to use the Face Login sign in to web sites feature.</li></ul>
--	--------------------------------------------------------------------------------------------------------------------------------------------

*Note: to ensure you can enjoy all the features in CyberLink YouCam, make sure your computer meets or exceeds the minimum system requirements.*

The system requirements listed below are the recommendations for running CyberLink YouCam with full HD effects (1080p).

<b>Recommended System Requirements for Full HD effect (1080p)</b>	
<b>OS</b>	<ul style="list-style-type: none"><li>• Microsoft Windows 8/7 (with DirectX 9 or above).</li></ul>
<b>Memory</b>	<ul style="list-style-type: none"><li>• 4 GB.</li></ul>
<b>CPU</b>	<ul style="list-style-type: none"><li>• Intel(R) Core(TM) i5-3360M CPU @ 2.80GHz (4 CPUs), ~2.8GHz</li><li>• AMD A8-5600K APU with Radeon(tm) HD Graphics (4 CPUs), ~3.6GH.</li></ul>
<b>HDD Space</b>	<ul style="list-style-type: none"><li>• 1 GB required.</li></ul>
<b>VGA Card</b>	<ul style="list-style-type: none"><li>• Intel HD Graphics 4000.</li><li>• AMD Radeon HD 7560D.</li></ul>
<b>Device</b>	<ul style="list-style-type: none"><li>• Webcam (built-in or external USB).</li></ul>
<b>Other Software</b>	<ul style="list-style-type: none"><li>• Instant messaging software with video communication functions, such as Skype, Yahoo Messenger, AOL Instant Messenger.</li><li>• Windows Internet Explorer 7 or above to use the Face Login sign in to web sites feature.</li></ul>

## Chapter 2:

# YouCam Overview

This section will help familiarize you with the CyberLink YouCam and give you an overview of some of the features. CyberLink YouCam consists of a number of different modes, modules, and windows. The YouCam interface can vary, but many of the options stay consistent.

When in the Capture window, the program displays as below.

A - Home/Return to Launcher, B - YouCam Menu, C - Update/Upgrade YouCam, D - Webcam Preview Window, E - Select YouCam Module/Window, F - Effects/Features Panel, G - YouCam Settings, H - Capture Controls, I - Go to Library Window, J - Captured Content

# Enabling YouCam for Instant Messaging

Once CyberLink YouCam is installed on your computer, you may have to enable it before you can use it with your instant messaging software. The following example demonstrates how to enable CyberLink YouCam for Skype.

---

***Note:** depending on the type of instant messaging software you are using, the procedure to enable CyberLink YouCam will differ. Consult the help for the instant messaging software you are using and see the section on selecting a webcam, video settings, or something similar.*

---

1. In the Skype main window, select **Tools - Options**.
2. Click on the **Video settings** section.
3. Find the **Select webcam** drop-down, and then select **CyberLink Webcam Splitter 6.0**.
4. Click the **Save** button to set your changes and enable CyberLink YouCam for instant messaging.

## Launching YouCam

You can launch CyberLink YouCam in the following ways:

- automatically when you begin a webcam video call with an instant messaging software (this is known as IM mode).
- manually from the start menu, desktop shortcut, or the icon in the system tray (this is known as stand alone mode).

---

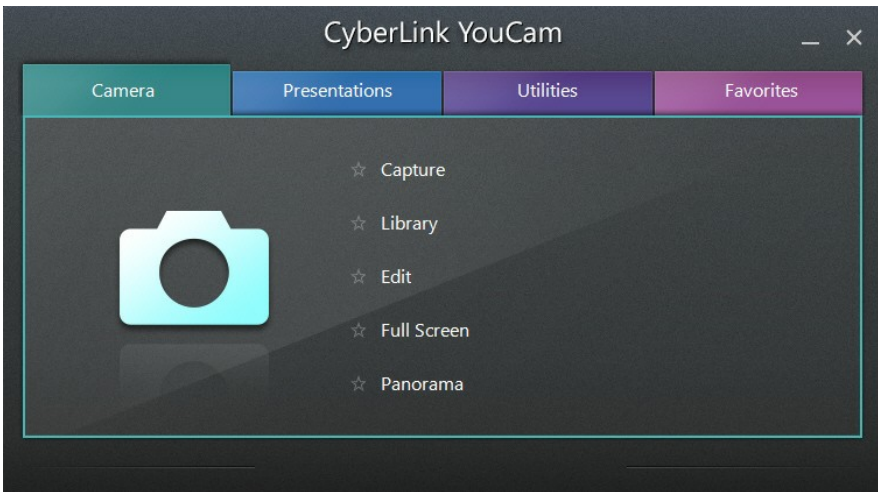

***Note:** you don't need to start a webcam video call to take photo snapshots, capture live webcam video, or to start a desktop capture. Just simply launch CyberLink YouCam manually in stand alone mode.*

---

When CyberLink YouCam is launched, you will either see the [YouCam Launcher](#) (where you can quickly access all the program's features), or the Capture window. You can set how the program launches in [Other Settings](#).

## YouCam Launcher

The YouCam launcher provides quick access to all of CyberLink YouCam's modules and features. Once enabled, it will display every time you launch the program in stand alone mode.

To enable the YouCam Launcher, select the **Show YouCam launcher at startup** option in [Other Settings](#).

---

***Note:** you can go to the YouCam launcher at any time by clicking the  button in any of the available windows.*

---

## Favorites

You can add the YouCam features you use most often into the Favorites menu, so you can quickly and easily access them when required. Click the **Favorites** tab to view your current favorite features.

By default, this Favorites tab is empty, but you can add a feature by doing this:

1. Click the tab in the YouCam launcher that has the feature you want to add to your favorites.

2. Hover your mouse over the feature you want to add to your favorites, and then select the star beside it.

---

**Note:** if you would like to remove a feature from your favorites, just deselect the highlighted star next to the feature in the menu.

---

## Display Modes

CyberLink YouCam has the following display modes: **stand alone mode**, **IM mode**, **split mode**, **full screen mode\***, and **mirror mode**. Some features are only available in certain modes.

- **Stand alone mode:** when CyberLink YouCam is launched manually from the start menu, desktop shortcut, or the icon in the system tray, it opens in stand alone mode. In stand alone mode you can record and upload videos to YouTube/Facebook, and e-mail photos. The video surveillance feature is only available in this mode.
- **IM mode:** when you start a webcam video call with someone on your instant messaging software (Skype, Yahoo Messenger, etc.), CyberLink YouCam launches in the smaller IM (instant messaging) mode.
- **Split mode:** you can share your webcam with more than one webcam application. To do this, launch your webcam application capture device and ensure it is using the CyberLink Webcam Splitter 6.0 (see [Enabling YouCam for Instant Messaging](#) for more information). Next, ensure the CyberLink YouCam system tray icon is available, right-click on it, and then select your **Capture Device** from the list. Next, set your **Capture Resolution** and then select **Launch Effects Room** to open the effects room. When you use visual effects, they display in any open webcam programs that are using the CyberLink Webcam Splitter.
- **Full screen mode\*:** is a mode of CyberLink YouCam that is optimized for touch screens. See [Full Screen Mode](#) for more detailed information.

- **Mirror mode:** you can access this mode via the start menu, the system tray icon, and through the Utilities. This mode is designed to act just like a real mirror. See [YouCam Mirror Mode](#) for more detailed information.

---

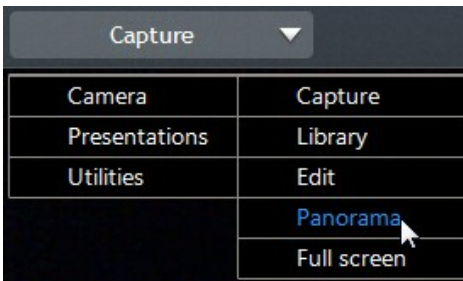

*Note: \* this feature is not available in some versions of CyberLink YouCam.*

---

# YouCam Modules

CyberLink YouCam is comprised of three main modules: **Camera**, **Presentations**, and **Utilities**. Each of these modules has different windows and many different features.

These modules can be accessed via the [YouCam Launcher](#) or by selecting a module or window from the drop-down at the top of most YouCam windows.

## Camera

The Camera module is where you can capture and create webcam media, edit the media, and more. The Camera module has the following windows and features:

- **Capture:** in the Capture window you can take photo snapshots and capture webcam video with effects. See [Capturing Media](#) for more information.
- **Library:** the Library window is where you can view all the photos and videos you have captured in the Capture window. See [YouCam Media Library](#) for more information.
- **Edit\*:** you can perform minor edits and touch ups on your captured media in the Edit window. See [Editing Captured Media](#) for more information.

- **Panorama\***: create panorama images with your webcam in the Panorama window. See [Panoramas](#) for more information.
- **Full Screen\***: lets you view your webcam in full screen mode. See [Full Screen Mode](#) for information on the features and functions available.

## Presentations

You can capture your computer's desktop, create video presentations, and enable a second webcam in the Presentations module. The features in the module include:

- **Desktop Capture\***: capture a video of your mouse movements on your computer's desktop. See [Desktop Capture](#) for detailed information.
- **Create Presentation\***: create and record video presentations\* that incorporate a PowerPoint presentation and video from your webcam. For more information, see [Creating Video Presentations](#).
- **Dual Video\***: enable a second webcam to record videos and use in webcam chats in IM mode for web conferencing. Go to [Enabling Dual Webcam Videos](#) for more information.

## Utilities

CyberLink YouCam includes a number of useful utilities that are sure to help you get the most out of your webcam. The Utilities module includes the following features:

- **Mirror**: provides access to the YouCam mirror. See [YouCam Mirror Mode](#) for more detailed information.
- **Surveillance**: select from a number of video surveillance and timed recording options you can use with your webcam. Go to [Video Surveillance](#) for more information on the surveillance features available.
- **Face Login\***: use this feature to log in to Windows and your favorite web sites with your face. See [Face Login](#) for information on setting up this feature on your computer.
- **Face-out\***: protect your computer with the Face-out feature that takes action

when you step away from your PC. For detailed information, see [Face-out](#).

---

**Note:** \* this feature is not available in some versions of CyberLink YouCam.

---

## Program Interface

When using both stand alone or IM mode, you can resize the CyberLink YouCam user interface to suit your requirements.

Simply click and drag  in the bottom right corner to resize any CyberLink YouCam window to fit your preference. You can also click on the CyberLink YouCam title bar to drag the program to a different location on your desktop.

## YouCam Settings

To configure the settings in CyberLink YouCam, select the  button on the top of the effects/features panel. Once you are done configuring the CyberLink YouCam settings, select **OK** to set your changes.

### Camera Settings

In the settings window, select the  tab. The available options are as follows:

- **Capture device:** select the primary webcam device you want to use with CyberLink YouCam from the drop-down list.
- **Capture resolution:** select the size/resolution of captured video from the drop-down list. Selecting a larger video size, results in a larger video file.

---

**Note:** CyberLink YouCam supports high-definition (1280×720) video capture if your webcam supports it. If capable, the 1280×720 option is available (without "Snapshot only" beside it) in the **Capture resolution** drop-down list.

---

- **Audio device:** select the audio device from the drop-down list that you want YouCam to use when capturing webcam videos.
- **Flip horizontally:** select this option to flip the webcam image horizontally.

---

**Note:** you can also click on the webcam image and drag left or right to flip it horizontally. If using a touch enabled display device, you can flip it by swiping left or right on the webcam image.

---

- **Capture with audio:** select this option if you want captured webcam video to

have audio.

---

**Note:** you need to have a microphone connected to your computer or webcam to capture webcam video with audio.

---

- **Enable video zoom:** select this option if you want to zoom in on the webcam image. Once selected, the following features are enabled:
  - **Auto face detection:** select to have CyberLink YouCam detect your face and auto zoom in slightly. Using this feature enables the program to track and follow your face as it moves around the webcam image.
  - **Manual zoom:** use the slider to manually zoom (up to 4x) in on a specific part of the webcam video. Drag the boxed area to the area of the video you want the camera to focus on.

## Capture & Snapshot Settings

In the settings window, select the  tab. The available options are as follows:

- **Capture folder:** set the folder where captured photos and videos are saved. To change the capture folder, select the  button and then a new folder location.
- **Countdown before capture:** select this option to enable a three second countdown before CyberLink YouCam begins capturing photo snapshots or videos.
- **Display timestamp:** select this option to display a timestamp on the webcam image. Once enabled, select the desired timestamp display format from the drop-down list.
- **Capture format:** select the file format for captured video from the drop-down list. If your computer supports Intel Quick Sync Video Technology, the HD H.264 (MP4) format video format is available.
- **Capture quality:** select the quality of the captured video from the drop-down list. The higher the quality selected, the larger the file size created.
- **Snapshot format:** select the photo file format of the captured snapshots from the drop-down menu.
- **Shutter speed:** select the rate of exposure, or the quickness the webcam

takes the snapshots.

- **Burst snapshots:** in the field provided, specify the number (between 2 and 10) of photo snapshots you want taken when the burst capture option is enabled.

## Other Settings

In the settings window, select the  tab. The available options are as follows:

- **Change UI language:** select the desired language of the CyberLink YouCam user interface. Select **Auto** to have the UI language match your computer's operating system language.
- **Effect thumbnail size:** lets you set the size of the visual effect thumbnails for emotion effects, avatars, gadgets, scenes, etc.
- **Show YouCam system tray icon at startup:** select this option to have the CyberLink YouCam system tray icon display when you log in to Windows.
- **Enable effect preview:** when selected, CyberLink YouCam displays a preview of the frame, distortion, and filter effects in the visual effect thumbnail. Disable this option to save computer resources.
- **Keep original photo when HDR effect is enabled:** if the HDR effect is enabled when taking photo snapshots, select this option if you want to keep a copy of the original photo. CyberLink YouCam applies the HDR effect to this original photo after capture. See [Applying the HDR Effect to Photos](#) for more information.
- **Show YouCam launcher at startup:** select this option if you want the YouCam launcher to display at startup. If not selected, CyberLink YouCam displays the Capture window at startup.

## DirectorZone Settings

On the settings window, select the  tab. The available options are as follows:

### Sign in to DirectorZone:

- **Auto sign in to DirectorZone when YouCam is launched:** select this option and then enter in your e-mail address and password to automatically sign

in to DirectorZone when the program is opened. If you do not have a DirectorZone account, click on the **Get an Account** link.

## Chapter 3:

# Webcam Effects

This section provides an overview of all the webcam effects in CyberLink YouCam, including scenes, gadgets, particles, avatars, augmented reality, and more. It also reviews the draw feature that lets you draw and add stamps on the webcam image.

These webcam effects are available in several different windows, modules, and modes.

## Using Visual Effects

CyberLink YouCam has many different visual effects\* that you can apply to your live webcam image during video chats. When applied, a user viewing your webcam instantly sees the effect. These effects can also be applied to any photo snapshots or webcam video you are capturing.

---

*Note: \* this feature is not available in some versions of CyberLink YouCam.*

---

## Visual Effects Overview

To view all the available visual effects\*, go to the Capture window of stand alone mode by doing either of the following:

---

*Note: the visual effects are available in several different windows, modules, and modes. Though there presentation may differ slightly, the features outlined below remain the same.*

---

- click on the **Camera** tab of the YouCam launcher, and then select **Capture**.
- select **Camera > Capture** from the drop-down menu that appears at the top of most CyberLink YouCam windows.

The following types of visual effects are available in the effects/features panel of CyberLink YouCam:

- **Frames:** stylish and festive borders that you can add on the webcam video.
- **Scenes:** fun locations where your webcam image displays, such as poster boards, video walls, and movie theater screens.

- **Particles:** image particles, such as falling leaves, that pile on your head and shoulders as they fall through the webcam image.

---

*Note: particle effects indicated by the  icon are interactive\* and will settle on your head, arms, and shoulders. Move around in the image to interact with them.*

- **Filters:** video filters that change the complete look of the webcam image.

---

*Note: the filters include the mosaic effect that uses face tracking technology to apply the filter to just your face or head.*

- **Distortions:** distorts the webcam video. Some distortions let you change\* the focal point of the distortion on the video with the click of a mouse or the touch of a finger.
- **Emotions:** temporary effects that help you express an emotion or appreciation to the webcam viewer.

---

*Note: select the  icon to enable emotion stamp mode\* to place an effect any where you like on the webcam image. Once enabled and displayed as , you can repeatedly select different locations on the webcam image where you would like the selected effect applied.*

- **Gadgets:** applied effects that let you magically add hats, masks, set your hair on fire, and more using face tracking technology.
- **Avatars:** animated character effects that use facial feature tracking to mimic your face movement and actions. Use an avatar if you are feeling a little camera shy or if you want to record a video with different characters. See [Using Avatars](#) for more information.

---

*Note: you can create your own custom avatars in the Avatar Creator. See [Creating New Avatars](#) for more information.*

- **Augmented Reality\*:** animated effects that appear with you in your webcam video. See [Augmented Reality](#) for detailed information on using augmented reality.

---

*Note: \* this feature is not available in some versions of CyberLink YouCam.*

---

## Sorting Effects

You can sort how the visuals effects are displayed on each tab. To do this, just click or touch the visual effect, and then drag it a new location on the tab.

## Downloading and Importing Effects

You can expand your visual effects library by downloading additional effects from DirectorZone. You can also download more facial features, accessories, and backgrounds when creating avatars in the Avatar Creator\*.

Once downloaded and imported into CyberLink YouCam, these effects are available right away for webcam chats and when capturing photos and videos.

---

**Note:** \* this feature is not available in some versions of CyberLink YouCam.

---

To download and import effects, do this:

1. Select the type of visual effect you want to download and then the  button.

---

**Note:** if the download button is not available, then the program does not support the download of that type of effect.

---

2. The DirectorZone web site loads in your default web browser. You must first sign in to DirectorZone to download templates. If you don't have an account, click the **Sign up** link at the top of the page to get one for free.
3. Browse to an effect on DirectorZone that you want to import and then download and install it on your computer.
4. Select the **YouCam** tab to display all the available visual effects you can download.
5. Find a visual effect you want to download, and then click the **Download** link underneath the template.
6. Click **Download** again, and then save the template to your computer. Find the location on your computer where you saved the template .dzip file, and then double-click on it to import it into CyberLink YouCam.

## Adding and Applying Visual Effects

To add or apply a visual effect\* to your live webcam video, do this:

---

**Note:** \* this feature is not available in some versions of CyberLink YouCam.

---

1. Select the type of visual effect you want to add/apply. See [Visual Effects Overview](#) for a list of all the available effects.

2. Browse through and then select the specific effect you want to add/apply to the webcam image.

---

***Note:** emotion effects are added to the webcam video and then disappear after a few seconds. Other effects (gadgets, avatars, filters, particles, etc.) remain applied until you apply another effect or select  to clear the effect.*

---

## Using Avatars

To use an avatar\* on your live web cam video, do this:

---

***Note:** you can create your own custom avatars in the Avatar Creator. See [Creating New Avatars](#) for more information. \* this feature is not available in some versions of CyberLink YouCam.*

---

1. Position your face in the center of the webcam preview window.
2. Select the  tab and then select **Avatars**.
3. Select the desired avatar to turn it on.

---

***Note:** select the  button underneath the webcam preview window to clear the current avatar and return to the original webcam video image.*

---

## Helpful tips

The following are some helpful tips to get the most out of the avatar visual effects in CyberLink YouCam:

- there should be adequate distance between your face and the webcam. At least 12 to 18 inches (30 - 45 cm).
- once the avatar is turned on, hold your head still for about 5 seconds so the software can properly calibrate and recognize your facial features.
- a well-lit environment is required for the avatar effect to work properly.
- for best results when using avatars, ensure the video size is between 320x240 and 640x480. See **Capture resolution** in [Camera Settings](#) for more information.

## Creating Customs Avatars in the Avatar Creator

In the Avatar Creator\* you can make your own custom avatars for use in webcam chats and when capturing photos and videos. You can then upload\* your custom avatars to DirectorZone.

**Note:** \* this feature is not available in some versions of CyberLink YouCam.

When on the avatar tab, select  to open the YouCam Avatar Creator window.

The Avatar Creator window displays as follows:

A - Set Faces, B - Add Accessories, C - Use Backgrounds, D - Pick a Color, E - Faces, F- Hair, G - Eyes, H - Eyebrows, I - Noses, J - Mouths, K - Created Avatars, L - Select Random Avatar Template, M - Preview Avatar

The avatars you create are available in the effects room, and have all the features and functions of the pre-created avatars.

## Creating New Avatars

To create an avatar, do this:

1. Select the  tab and then select **Avatars**.
2. Click the  button to open the Avatar Creator.
3. Select the **Randomize** button to choose a random avatar to use as a template. You can also select an avatar you created previously, and then click  to edit it.

---

**Note:** during the creation of your avatar, select the play button to preview your avatar. Select the pause button to return to edit mode.

---

4. To customize your avatar's face, select the  tab and then use the following features:

---

**Note:** select the  button to download\* more facial features, accessories, and backgrounds from DirectorZone. \*this feature is not available in some versions of CyberLink YouCam.

---

- select the  tab to change the shape of the avatar's face.
- select the  tab to select a hairstyle for the avatar's face.
- select the  tab to change the shape of the avatar's eyes.
- select the  tab to change the eyebrows on the avatar's face.
- select the  tab to change the shape of the avatar's nose.
- select the  tab to change the shape of the avatar's mouth.

---

**Note:** set the color of each facial feature (except the nose) by selecting the  button and then picking a color.

---

5. To add accessories such as hats and earrings to your avatar, select the  tab and then use the following features:

- select the  tab to add a hat or other hair accessory to your avatar.
- select the  tab to put earrings on your avatar.

---

**Note:** select the accessory item with a line through it to remove the current hat or earrings from the avatar.

---

6. To change the background for your avatar, select the  tab and then a background from the list.

---

**Note:** select the  button if you would like to import and use your own custom background image for the avatar. If you don't want to include a background, select the background with a line through it to remove it from the avatar.

---

7. Select the **Save** button to save the avatar to the created avatars area. If you are not satisfied with how it turned out, you can also click the **Reset** button to restore the avatar to the original.

---

**Note:** your avatar is also saved to the avatar visual effects tab. See [Using Avatars](#) for information on using your custom avatar.

---

## Uploading Avatars to DirectorZone

Once you are done customizing your avatar, upload\* it to DirectorZone and share it with other users of CyberLink YouCam.

---

**Note:** \* this feature is not available in some versions of CyberLink YouCam.

---

To upload an avatar to DirectorZone, do this:

1. In the main CyberLink YouCam window, select the **Sign in to DirectorZone** link on the CyberLink YouCam title bar. Follow the steps to sign in to DirectorZone.
2. Select the  tab and then the  button to open the Avatar Creator.
3. Select the avatar in the created avatars area that you want to upload, and then select .
4. In the Upload to DirectorZone window, enter an **Avatar name** and

**Description** in the fields provided.

5. Click the **Upload** button to finalize the upload to DirectorZone, and **Finished** to return to the Avatar Creator window.

## Augmented Reality

Use augmented reality\* to add animated effects that appear with you in your webcam video. By displaying the pattern in your video, you can add effects that will impress your friends.

---

*Note: \* this feature is not available in some versions of CyberLink YouCam.*

---

## Setting Up Augmented Reality

To use augmented reality, you must set up the feature by drawing/printing/capturing the required pattern. When you hold this pattern in front of your webcam, CyberLink YouCam detects it and displays the selected augmented reality animation.

To set up augmented reality, do this:

1. Select the  tab, and then the **AR** tab.
2. To create the pattern, do one of the following:
  - Draw on a piece of paper the exact pattern as it is displayed below:

- Click the  button to print off the pattern, and then use the printing options to set the size and number of patterns to print per page. Click  to print the pattern.

---

*Note: CyberLink YouCam can display up to two duplicate augmented reality animations at one time if you are using more than one pattern.*

---

- Click the  and then use a mobile phone's camera to take a photo of the

pattern. Select **Close** once the photo is taken.

## Using Augmented Reality

To use augmented reality, do this:

1. Select the  tab, and then the **AR** tab.
2. Select one of the available effects.
3. Take the pattern you drew/printed off/took a photo of, and then hold it steady in front of your webcam to see the animation.
4. If required, select another augmented reality effect from the list.

### Helpful tips:

The following are some helpful tips to get the most out of the augmented reality visual effects in CyberLink YouCam:

- hold the pattern an adequate distance from the webcam. At least 12 to 18 inches (30 - 45 cm).
- once an augmented reality effect is turned on, hold your the pattern still for about 5 seconds so the software can properly detect it.
- a well-lit environment is required for the augmented reality effect to work properly.
- to see the augmented reality effect correctly, hold the pattern so the "CL" pattern is right-side-up and readable in the webcam image.
- rotate the pattern to see all sides of the augmented reality effect.
- you can include your own photos in augmented reality effects that have the  icon on their thumbnail. To add photos, click on  and then select  to specify the photos you want to use.
- hold the magnifying glass augmented reality effect in front of your face to magnify it in the webcam image.

# Drawing on the Webcam Image

In CyberLink YouCam you can draw on the webcam video image. You may also select from a number of stamps and color boards to apply to the video.

To perform a freehand drawing on your live webcam video, do this:

1. Select the  tab.
2. In the effects/features panel, click on the **Brushes** tab and then use any of the following:
  - to draw on the webcam image, select the **Marker** button, choose your desired color, and then adjust the size of the drawn line. Next, use your mouse or finger to draw on the webcam image.
  - to use an eraser to remove portions of your drawing, select the **Eraser** button, and then set eraser size. Next, use your mouse or finger to erase segments of your drawing.
  - to replace the webcam image with a color board, select the **Color Board** button. Next, choose the color of the color board from the list to enable it. You can use the color board as a canvas for a drawing.
3. In the effects/features panel, click on the **Stamps** tab and then choose the desired color and stamp pattern. Next, use the mouse to apply the stamp by selecting the webcam image. If you are using a touch-enabled device, you can use your finger to apply the selected stamps on the webcam image or drag it across the image for a swirl-like effect.
4. To remove the drawing from the webcam image, select the  button underneath the webcam preview window.

## Chapter 4:

# Capturing Media

This section outlines the webcam media capture features in CyberLink YouCam. You can capture media in several different windows, but this section will focus on capturing media in the Capture window.

To open the Capture window, do any of the following:

- select the **Camera** tab of the YouCam launcher, and then select **Capture**.
- select **Camera > Capture** from the drop-down menu that appears at the top of most CyberLink YouCam windows.
- select the  button in the Library or Edit window.

If you have two webcams connected to your computer, and CyberLink YouCam is not currently displaying the webcam video you want to capture, select the  button in the preview window to switch to the other connected webcam.

## Enhancing the Video Image

Before you begin capturing photo snapshots and recording webcam videos, select the  button underneath the webcam preview window to enhance\* the video image.

In the Video Enhancement window, the following controls are available:

- **Auto lighting:** select this option to have CyberLink YouCam auto adjust and correct the lighting in the webcam video image for you.
- **TrueTheater enhancement\*:** select this option and then use the following sliders to enhance the video image using TrueTheater technology from CyberLink:
  - **Video sharpness:** use to enhance the video image, making it sharper and artifact-free.
  - **Noise reduction:** use to reduce the video noise or static on your webcam video image, making it clearer.

- **Brightness:** use the slider to manually adjust the brightness of the webcam video image.
- **Contrast:** use the slider to adjust the difference in proportion between lights and darks in the webcam video image.
- **Exposure:** use the slider to adjust the amount of light that is captured in the webcam video image. Adjusting this feature can dramatically change the overall brightness of your webcam video.

---

**Note:** \* this feature is not available in some versions of CyberLink YouCam.

---

Select the **Advanced** button to adjust the specific settings for your webcam device. Consult your webcam's user manual for a detailed description of the available controls. Select the **Default** button to return all the settings back to their original values.

Click  to close the Video Enhancement window and save the changes.

## Taking Photo Snapshots

With CyberLink YouCam you can instantly take a photo snapshot of the current frame of the webcam video, or take a series of photos in quick succession using the burst feature.

To take photo snapshots, ensure the photo snapshot option is selected on the capture controls.

## Taking Snapshots

To take one photo snapshot of the current frame of video, do this:

1. Select the  button on the capture controls.

---

**Note:** you can add effects to your snapshot by applying them before you select the capture button. See [Using Visual Effects](#) for more information.

---

2. CyberLink YouCam takes the photo, places it in the captured content area, and also saves it in the capture folder specified in [Capture & Snapshot](#)

[Settings](#). The photo is also imported into the [YouCam Media Library](#).

---

**Note:** you can right-click on a captured snapshot and then select **Locate File on Disk** to view its saved location on your computer.

---

## Using the Burst Feature

To take a series of photo snapshots in quick succession using the burst feature, do this:

---

**Note:** to set how many photo snapshots are taken with the burst feature, see **Burst snapshots** in [Capture & Snapshot Settings](#).

---

1. Select the  button underneath the webcam preview window, and then ensure that **Burst** is selected.
2. Select the  button on the capture controls.

---

**Note:** you can add effects to your burst snapshots by applying them before you select the capture button. See [Using Visual Effects](#) for more information.

---

3. CyberLink YouCam takes the photo snapshots, places them in the captured content area, and also saves them in the capture folder specified in [Capture & Snapshot Settings](#). The photos are also imported into the [YouCam Media Library](#).

---

**Note:** you can right-click on a captured snapshot and then select **Locate File on Disk** to view its saved location on your computer.

---

## Applying the HDR Effect to Photos

CyberLink YouCam can apply the HDR\* effect to a photo after it is captured. To apply the HDR effect, do this:

---

**Note:** \* this feature is not available in some versions of CyberLink YouCam.

---

1. Select the  button underneath the webcam preview window, and then ensure that **HDR effect** is selected.
2. Select the  button underneath the webcam preview window.

---

**Note:** you can add effects to your HDR photo snapshots by applying them before you select the capture button. See [Using Visual Effects](#) for more information.

---

3. CyberLink YouCam takes the photo and then places the original photo\*\*, and the photo with HDR effect applied, in the captured content area. The

HDR photo is indicated by the **HDR** logo on its thumbnail. The photos are also imported into the [YouCam Media Library](#).

---

**Note:** \*\* CyberLink YouCam will only save a copy of the original photo if the **Keep original photo when HDR effect is enabled** option is selected in [Other Settings](#)

---

## Capturing Video

With CyberLink YouCam you can capture a live webcam video, complete with effects, avatars, added gadgets, frames, filters, particles, distortions, or set in an applied scene.

---

**Note:** CyberLink YouCam supports the recording of high-definition (1280×720) video if your webcam is capable of outputting at this resolution. See **Capture resolution** in [Capture & Snapshot Settings](#) for more information.

---

To capture a webcam video, ensure the video option is selected on the capture controls.

## Capturing a Webcam Video

To capture a webcam video, do this:

1. When you are ready to begin capturing a video, select the  button on the capture controls.
  2. CyberLink YouCam begins to capture the current webcam video. You can add effects to your webcam video as required. See [Using Visual Effects](#) for more information.
- 

**Note:** if required, you can select  to pause the capture. Select  again to continue capturing from the paused position.

---

3. To stop capturing the video, select the  button.
4. When CyberLink YouCam stops capturing the video, your video is placed in the captured content area, and saved to the capture folder specified in [Capture & Snapshot Settings](#). The video is also imported into the [YouCam](#)

[Media Library](#).

---

**Note:** you can right-click on a captured video file and then select **Locate File on Disk** to view its saved location on your computer.

---

## Captured Content

All of your captured snapshots and recorded videos are saved in the captured content area located beneath the webcam video window.

---

**Note:** if you are using a touch enabled device, you can scroll through the media by dragging your finger across the captured content area.

---

You can double click on video files to play them back, or on photos to view and edit them in the Edit window. See [Editing Captured Media](#) for more information.

Click the  button to view all of the captured media files in the Library window. See [YouCam Media Library](#) for more information.

---

**Note:** right click on files in the captured content area for more options including file deletion, renaming, or viewing its location on your computer. You can also choose to send a media file to an installed program on your computer.

---

## Chapter 5:

# YouCam Media Library

The YouCam media library contains all of the captured photo snapshots and webcam videos you took with CyberLink YouCam. In the Library window you can view these media files in a calendar view by day, month, or by the faces that were tagged in the photos. You can also share the media in the library by uploading it to Facebook or YouTube, or by e-mailing it directly to friends and family.

To open the Library window, do any of the following:

- select the **Camera** tab of the YouCam launcher, and then select **Library**.
- select **Camera > Library** from the drop-down menu that appears at the top of most CyberLink YouCam windows.
- select the  button in the Capture or Edit window.

## Viewing Media in the Library

The Library window contains all the photos and videos found in the capture folder specified in [Capture & Snapshot Settings](#). In the Library window you can browse through you media, view each individual media file, and then decide to edit, share, or remove them from library as required.

You can sort the media in the Library window by:

- **Day**: select this option to view all the media files by the day they were captured in CyberLink YouCam.
- **Month**: select to view a calendar of your media. Use the zoom slider to zoom in on a specific month, or double-click on specific day to switch back to the **Day** view.
- **Faces\***: select to browse through the captured photos by the faces tagged in them.

---

**Note:** \* this feature is not available in some versions of CyberLink YouCam.

---

You can filter the media in the Day or Month views by:

-  - both photos and videos.
-  - photos only.
-  - videos only.

To view a media file, just double click on it. You can also edit a media file by selecting it and clicking the  button. See [Editing Captured Media](#) for more information on viewing and editing media files.

While viewing media in the Library window, you can also:

- use the zoom slider to dynamically resize the media thumbnails or change the calendar view.
- select a media file and then click the  button to share it on YouTube, Facebook, or via e-mail. See [Sharing Media in the Library](#) for more information.
- select a media file and then click the  button to delete it from the YouCam media library. This file will also be deleted from your computer's hard drive.

## Sharing Media in the Library

The media files you captured with CyberLink YouCam can be shared on YouTube and Facebook, or e-mailed directly to your friends and family.

## Uploading Videos to YouTube

You can upload videos in the Library window to YouTube. You can also share the effect information used in your video with other CyberLink YouCam users on DirectorZone.

To upload a captured video to YouTube, do this:

---

**Note:** *you can only upload one video at a time.*

---

1. Select the video file in the Library window that you want to upload to YouTube.

2. Select the  button and then .
3. Click on the **Authorize** button.
4. In the sign in window, do one of the following:
  - if you already have a YouTube account, enter in your **Email** and **Password** in the fields provided and then select the **Sign in** button. Once signed in, authorize CyberLink YouCam to use your account to upload content.
  - if do not have a YouTube account, select the **Sign Up** button to create a new account. Once created, go to the above step to sign in.
5. The describe your video window displays. Enter the details about your video as follows:
  - **Title:** enter the title of your webcam video.
  - **Description:** enter in a short description of your webcam video.
  - **Tags:** enter in several tags, separated by a comma, that describe your video. Tags are keywords that people can search for on YouTube.

---

*Note: you must enter a title, description, and at least one tag before you can upload your video.*

---

  - **Video category:** select the relevant video category type from the available list.
  - **Broadcast:** select whether to share your video with the world or set it as private.

---

*Note: sign in to DirectorZone and then select **Share in the DirectorZone Video Gallery** if you want to share the uploaded video with the DirectorZone user community.*

---
6. Select the **Next** button to proceed. The copyright disclaimer window is displayed.
7. Read and confirm the copyright information by selecting the corresponding check box and then select the **Upload** to begin uploading your webcam video to YouTube. Select the **Finished** button once your video is uploaded.

## Uploading Photos to Facebook

You can upload photos in the Library window to your Facebook page. To upload captured photos to Facebook, do this:

1. Select the photo in the Library window that you want to upload to Facebook.
2. Select the  button and then .
3. Click the **Authorize** button.
4. In the log in window, do one of the following:
  - if you already have a Facebook account, enter in your **Email or Phone** and **Password** in the fields provided and then select the **Log in** button. Once signed in, click **Okay** to authorize CyberLink YouCam to use your account to upload content.
  - if do not have a Facebook account, select the **Sign up for Facebook** button to create a new account. Once created, go to the above step to sign in.
5. Once the authorization and connection process is complete, enter the details about your photos as follows:
  - **Select album:** select an existing album from your Facebook page to upload the photos to. Select **Create a New Album** to add the photos to a new album.
  - **Album name:** enter a name for the newly created photo album.

---

*Note: if you are creating a new album, you must enter an album name before you can upload your photos.*

---

  - **Album location:** enter in the location where the photos were taken.
  - **Album description:** enter in a short description for the photos you are uploading.
  - **Privacy:** select who has permissions to view these photos once they are uploaded.
  - **Add photo description:** enter a description that will display under all of the uploaded photos.
6. Select **Upload** to begin uploading your photos to Facebook. Select the **Finished** button once your photos are uploaded.

## Uploading Videos to Facebook

You can upload videos in the Library window to Facebook. To upload a captured video to Facebook, do this:

---

*Note: you can only upload one video at a time.*

---

1. Select the video file in the Library window that you want to upload to Facebook.
2. Select the  button and then .
3. Click the **Authorize** button.
4. In the log in window, do one of the following:
  - if you already have a Facebook account, enter in your **Email or Phone** and **Password** in the fields provided and then select the **Log in** button. Once signed in, click **Okay** to authorize CyberLink YouCam to use your account to upload content.
  - if do not have a Facebook account, select the **Sign up for Facebook** button to create a new account. Once created, go to the above step to sign in.
5. Once the authorization and connection process is complete, enter the details about your video as follows:
  - **Title:** enter the title of your webcam video.
  - **Description:** enter in a short description for the video you are uploading.
6. Select **Upload** to begin uploading your video to Facebook. Select the **Finished** button once your video is uploaded.

## E-mailing Photos and Videos

You can e-mail photos and videos in the Library window to your friends and family. To e-mail photo snapshots and videos, do this:

---

*Note: CyberLink YouCam uses your computer's default mail client to e-mail photos and videos, if available. The e-mail feature does not work if you usually send e-mails through a web browser. To change the e-mail account that CyberLink YouCam uses, please go to your e-mail application (such as Microsoft Outlook, Outlook Express, etc.) and reset/change your e-mail account settings.*

---

1. Select all of the media files in the Library window that you want to e-mail.

2. Select the  button, and then . CyberLink YouCam launches your default mail client and attaches all of the selected media files to the new e-mail message.

---

**Note:** *if your computer does not have a default e-mail client configured, then the auto e-mail feature may not work. If it does not work, right-click on a media file in the [Captured Content](#) area, select **Locate File on Disk**, and then manually attach the media files to the e-mail message.*

---

3. Complete the sending of the e-mail in your default e-mail program as required.

## Chapter 6:

# Editing Captured Media

You can perform edits on the photos captured in CyberLink YouCam. To open the Edit window, do any of the following:

- select the **Camera** tab of the YouCam launcher, and then select **Edit**.
- select **Camera > Edit** from the drop-down menu that appears at the top of most CyberLink YouCam windows.
- select the  button in the Library window.

## Editing Photo Snapshots

In the Edit\* window you can tag and edit the face tags in photos, add preset effects and frames on the image, draw on the photo, or crop out unwanted portions of the photo.

---

**Note:** \*this feature is not available in some versions of CyberLink YouCam.

---

To edit a photo, select it in the Library window and then select . Once in the Edit window, use the  and  buttons to go to the next or previous photo or video if required.

In the Edit window you can perform the following edits:

---

**Note:** while editing a photo, click the  button at any time to undo the last edit.

Select the  button at the bottom of the Edit window to reset all the edits made to a photo.

---

- select the  button to tag the faces in the photo, or edit the existing tagged faces. See [Tagging Faces in Photos](#) for detailed information on tagging faces in photos. Once you are done, select the  button again to set your changes.
- select  to add a stylish and festive border to the photo. Once you have selected the frame you want to use, click  to set the change.

- select  to add a color preset effect on the photo. Select a preset effect from the list to apply it to the photo. Once you have selected the preset effect you want to use, click  to set the change.
- select  to draw on the photo. See the relevant parts in [Drawing on the Webcam Image](#) for information on using the marker, eraser, and color boards to draw on the photo. Once you have finished drawing on the photo, click  to set the change.

---

**Note:** you cannot apply stamps on photos in the Edit window.

---

- select  to crop the current photo. Set the size of the crop area by selecting a **Fixed ratio**. Once selected, you can select the crop area on the photo and drag it to the part of the photo you want to keep. To crop out a custom area, select the **Freeform** option and then select and position the edges of the crop area to fit your requirements. If required, use the **Straighten** slider to fix a crooked photo, and then click  to perform the crop once you are ready.

Once you are done editing a photo, select the  button to save the changes. Click  to save it to the original photo, or  to save it as a new photo that will be added to the library.

## Tagging Faces in Photos

To tag\* the faces in a captured photos, do this:

---

**Note:** \* this feature is not available in some versions of CyberLink YouCam.

---

1. Select the  button to tag the faces in the photo.
2. CyberLink YouCam will add face tags to all the faces it detects. Resize each face tag square if required and then select **Unknown**.
3. Enter the person's name that is tagged and then select  to add them to the YouCam media library and tag the person in the photo.

---

**Note:** the next time you capture a photo of the tagged person, CyberLink YouCam will recognize and auto tag them for you. If the face tag is incorrect, you can always select the name and enter the correct person.

---

4. If CyberLink YouCam did not detect a face in the captured photo, select the  button. Resize and then drag the face tag square onto the face. Select **Unknown**, enter the person's name, and then select .
5. Once all of the faces are tagged in the photo, select  to save your changes.

## Playing Videos

In the Edit window you can play back the webcam videos captured in CyberLink YouCam.

---

***Note:** the editing of captured video files is not yet supported in CyberLink YouCam.*

---

To play a video, select it in the Library window and then select . Once in the Edit window, use the  and  button to go to the next or previous photo or video if required.

Select the  button to play the video file. Select  to pause the playback.

## Chapter 7:

# Panoramas

In CyberLink YouCam you can create a panorama\* image by taking a series of photos snapshots with your webcam.

---

**Note:** \* this feature is not available in some versions of CyberLink YouCam.

---

To open the Panorama window, do any of the following:

- select the **Camera** tab of the YouCam launcher, and then select **Panorama**.
- select **Camera > Panorama** from the drop-down menu that appears at the top of most CyberLink YouCam windows.
- in the Capture window, select the  button in the capture controls, and then select **Panorama**.
- in full screen mode, select the  button, and then **Panorama**.

## Creating a Panorma Image

To create a panorama image with your webcam, do this:

---

**Note:** if required, select the  button at the top of the screen to display the grid. The grid can help you align the photo snapshots for the panorama and ensure they are straight.

---

1. Select the screen to hide the panorama tips.
2. Position the webcam where you want to take the first photo snapshot to use in the panorama, and then select the  button.

---

**Note:** if you want to retake a photo in the panorama, click the  button to remove the last photo taken.

---

3. Move the webcam to the next position, and then select the  button again. If the photo snapshot was taken, it will be added to the stitch result area.

---

**Note:** the photo snapshots for the panorama should be taken from left to right.

---

## CyberLink YouCam

4. Repeat step three, taking all the photo snapshots you want in the panorama image.

---

**Note:** for best results, check the edge of the last photo, which is displayed to the left of the live webcam image. Be sure to align the edge of the last photo with the next photo you capture. CyberLink YouCam will not add the photo to the stitch result area if the alignment with the previous photo is too far off.

---

5. Once you have taken all the photo snapshots for the panorama, click the  button. CyberLink YouCam will stitch all the photo snapshots together to create the panorama image.
6. Click the  button to save the panorama and import it into the [YouCam Media Library](#).

## Chapter 8:

# Full Screen Mode

CyberLink YouCam includes a full screen mode\* that is optimized for touch screens. To access the full screen mode, do any of the following:

- select the **Camera** tab of the YouCam launcher, and then select **Full Screen**.
- select **Camera > Full Screen** from the drop-down menu that appears at the top of most CyberLink YouCam windows.
- select the  button in the Capture webcam preview window.

---

*Note: \* this feature is not available in some versions of CyberLink YouCam.*

---

## Features in Full Screen Mode

Once in full screen mode, you can:

---

*Note: mouse movements and the YouCam tool bar are not displayed in photo snapshots or recorded videos captured in full screen mode.*

---

- use the zoom slider on the left side of the window to zoom in or out on the webcam image.
- select  to switch to another connected webcam.
- take photo snapshots and record webcam videos. See [Capturing Media](#) for detailed information about capturing webcam media.

---

*Note: before capturing media in full screen mode, be sure to select  to set the capture options. In the capture options you can have the HDR effect applied to photo snapshots, use the burst feature, or take a panorama with your webcam. See [Panoramas](#) for more information on creating a panorama image.*

---

- select  to apply effects and draw on the webcam image. Select  to clear any applied effects if required. See [Webcam Effects](#) for more information about applying effects and drawing on the webcam image.

## CyberLink YouCam

- select  to enhance the webcam's video image. See [Enhancing the Video Image](#) for more information.
- select  to configure the YouCam settings. See [YouCam Settings](#) for more information.
- select the square media thumbnail button on the right of the YouCam toolbar to edit captured media in the Edit window. See [Editing Captured Media](#) for more information.

Select  or press the Esc key on your keyboard to exit full screen mode.

Select  to return to the YouCam launcher.

## Chapter 9:

# Presentations

This section provides a complete overview of the presentations section of CyberLink YouCam. In it you can capture a video of the mouse movements on your computer's desktop, create a video presentation, and enable a second webcam for use in videos and for conferencing.

## Desktop Capture

The desktop capture\* feature lets you capture a video of your mouse movements on your computer's desktop. You can use this feature in both stand alone and IM\*\* modes, allowing you to record a video or share your desktop movements in a webcam chat.

---

***Note:** \* this feature is not available in some versions of CyberLink YouCam. \*\* in IM mode this feature is called Desktop Share, as there is no capture feature available.*

---

To capture your desktop movements, do this:

---

***Note:** when using this feature on a desktop that extends to a secondary display device, it only captures desktop movements on the primary display device.*

---

1. Do either of the following to access the desktop capture feature:
    - select the **Presentations** tab of the YouCam launcher, and then select **Desktop Capture**.
    - select **Presentations > Desktop Capture** from the drop-down menu that appears at the top of most CyberLink YouCam windows.
  2. In the Desktop Capture dialog, select:
    - **Full screen** to capture/share your entire desktop area.
    - **Mouse movement** and then the size of the capture area from the drop-down. This option will capture/share an area that follows the movement of your mouse.
    - **Fixed area** and then select and drag the displayed box to the area of your desktop that you want to capture/share.
- 

***Note:** you can select the edges and corners of the box to resize the fixed area.*

---

3. Set the **Capture/Stop Hotkey** by selecting it from the drop-down. A hotkey is a key on your keyboard that you can press to start and stop the desktop capture.
4. Select **Capture** (or press the hotkey on your keyboard specified in the previous step) to begin.
5. Once you are finished recording your video, press the Capture/Stop Hotkey you specified again to stop the desktop capture.
6. Click **Restore** to return to the CyberLink YouCam main window. If you are capturing a video in stand alone mode, the recorded video is placed in the captured content area, and saved in the capture folder specified in [Capture & Snapshot Settings](#). The video is also imported into the [YouCam Media Library](#).

## Creating Video Presentations

In CyberLink YouCam you can create and record video presentations\* that incorporate a PowerPoint presentation and video from your webcam.

---

***Note:** the create presentation feature is also available in IM mode, but instead of recording the video presentation, CyberLink YouCam shares it live with the person you are chatting with on the webcam. \* this feature is not available in some versions of CyberLink YouCam.*

---

There are five presentation modes to choose from, and you can use pen mode to highlight important points in the presentation video.

---

***Note:** the Microsoft PowerPoint files can be in either the PPT or PPTX format. Files with the extension PPTX, are not supported in video presentations if Microsoft Office 2007 is not installed on your system. However, if you are using Microsoft Office 2002/2003, you can install a converter from Microsoft to include these files in the video presentation.*

---

To create a presentation video, do this:

1. Do either of the following to access the Create Presentations window:
  - select the **Presentations** tab of the YouCam launcher, and then select **Create Presentations**.
  - select **Presentations > Create Presentations** from the drop-down menu that appears at the top of most CyberLink YouCam windows.

2. Select the  button and then the PowerPoint files (in the PPT or PPTX format) you want to use in the presentation. You can also drag and drop files onto the Create Presentations panel.
- 

**Note:** once a PowerPoint is imported into Create Presentations panel, select  to change the size of the slides thumbnails if required..

---

3. Select one of the following video presentation modes:

-  **Teacher mode:** the webcam video and a larger view of the PowerPoint file are shown simultaneously.
  -  **Full window mode:** the PowerPoint file occupies the entire video webcam window.
  -  **Speaker mode:** the PowerPoint file and a larger webcam video are shown simultaneously.
  -  **Share mode - camera:** only the webcam video image is displayed in the video presentation.
  -  **Share mode - side by side:** the PowerPoint file and the webcam video image are shown side by side in the video presentation.
- 

**Note:** you can switch to another mode at any time during the video presentation, if required.

---

4. Select the  button to begin capturing the video presentation, starting from the first selected slide.
- 

**Note:** if you are in IM mode, CyberLink YouCam begins sharing the video presentation as soon as the **Presentations** option is selected, and the PowerPoint file is imported.

---

5. Use the  and  buttons to go through the slides in the PowerPoint file, as required.
- 

**Note:** if required, you can select  to pause the capture. Select  again to continue capturing from the paused position.

---

6. If required, select  to enable pen mode and use your mouse or finger to draw on the presentation to highlight important points. Select  to set the color and pen size.

---

**Note:** select  to enable eraser mode (and  to set the eraser size). Use your mouse or finger to erase any unwanted pen marks on the presentation, if required. Select  underneath the webcam preview window to clear all pen marks.

7. Select the  button to stop capturing the presentation video. The presentation video is placed in the captured content area, and saved to the capture folder specified in [Capture & Snapshot Settings](#). The video is also imported into the [YouCam Media Library](#).

---

**Note:** if sharing the video presentation in IM mode, select another feature in CyberLink YouCam to stop the presentation, or just end the video call.

## Enabling Dual Webcam Videos

CyberLink YouCam lets you use two\* webcams at once to record videos and in webcam chats in IM mode for web conferencing.

---

**Note:** no visual effects can be applied when using two webcams, and CyberLink YouCam sets the resolution to 640x480 for both. \*this feature is not available in some versions of CyberLink YouCam.

To enable a second webcam in CyberLink YouCam, do this:

1. Ensure that the second webcam is connected to your computer and turned on.
2. Do either of the following to enable the second webcam:
  - select the **Presentations** tab of the YouCam launcher, and then select **Dual Video**.
  - select **Presentations > Dual Video** from the drop-down menu that appears at the top of most CyberLink YouCam windows.
3. On the Dual Video panel, **Select your second webcam** from the drop-down list.

---

**Note:** video enhancements enabled in the Video Enhancement window are only applied to the primary webcam's image.

4. Next, select one of the available layouts for your PiP webcam video.

5. Proceed to record your video or participate in the web conferencing call as required.

To turn off the second webcam video, just exit the Dual Video panel by selecting another feature in CyberLink YouCam, returning to the YouCam launcher, or closing the program.

## Chapter 10:

# YouCam Utilities

This section outlines the useful utilities in CyberLink YouCam, including a feature that lets you log in to Windows and web sites when it detects your face, and another that protects your computer when your face leaves the webcam image.

Utilities also include the video surveillance features of CyberLink YouCam, and quick access to the YouCam mirror.

## YouCam Mirror Mode

The CyberLink YouCam Mirror is designed to act just like a mirror if ever you need one.

To open the CyberLink YouCam Mirror, do one of the following:

- select the **Utilities** tab of the YouCam launcher, and then select **Mirror**.
- select **Utilities > Mirror** from the drop-down menu that appears at the top of most CyberLink YouCam windows.
- right-click on the CyberLink YouCam icon in the system tray and then select **Launch YouCam Mirror**.
- select **CyberLink YouCam 6 Mirror** from the start menu.

When viewing the CyberLink YouCam Mirror, the following options are available:

- use the available slider to zoom in or out on the mirror's image, as required.
- select  to enhance the mirror's image. See [Enhancing the Video Image](#) for information on enhancing the image.
- select the  button to horizontally flip the mirror's image.
- select the  button to access the [Mirror Settings](#).

## Mirror Settings

In the mirror settings dialog, configure the settings as follows:

- select the **Resolution** tab and then set the resolution you want CyberLink YouCam to use in mirror mode. The resolutions that are available depend on your webcam's supported video output.

---

***Note:** to ensure the best mirror image is available, it is recommended that you set the resolution to the maximum available. Mirror mode works best with webcams that support high-definition (1280×720) output.*

---

- select the **Frames** tab and choose a frame for your CyberLink YouCam Mirror.

When you are done, select  to close the settings dialog and set your changes.

## Video Surveillance

CyberLink YouCam allows you to select from a number of video surveillance options, or timed recordings, that let you set a time when the recording automatically stops recording. You can also make a time-lapse recording or set up your webcam to begin recording when it detects motion.

Then once CyberLink YouCam finishes recording, you can have the program automatically e-mail the captured video to a specified e-mail address.

## Motion Detection Recording

When motion detection recording is enabled, CyberLink YouCam begins a recording if your webcam detects motion and then stops once the movement ends.

To enable a motion detection recording, do this:

1. Do either of the following to access the Face Login window:
  - select the **Utilities** tab of the YouCam launcher, and then select **Surveillance**.
  - select **Utilities > Surveillance** from the drop-down menu that appears at the top of most CyberLink YouCam windows.

2. Select the **Motion detection recording** option and then enter the **Recording end time** in the fields provided.

3. In the **Define detection area**, use your mouse to resize and then drag the box to the location on the video image where you CyberLink YouCam to detect motion.
4. Use the **Sensitivity** slider to set the level of motion sensitivity. You may need to scroll down in the settings window to find this slider.
5. Select **Start**. CyberLink YouCam enters stand by mode and captures video when it detects motion.

---

*Note: CyberLink YouCam remains in stand by mode for motion recording until the specified end time or until you select the **Stop** button.*

---

6. Any recorded videos are placed in the captured content area, and saved to the capture folder specified in [Capture & Snapshot Settings](#). The video is also imported into the [YouCam Media Library](#).

---

*Note: you can right-click on the captured video and select **Locate File on Disk** to view its saved location on your computer.*

---

## Continuous Recording

The continuous recording option lets you set a recording that continues, uninterrupted, until the specified end time.

To enable a continuous recording, do this:

1. Do either of the following to access the Face Login window:
  - select the **Utilities** tab of the YouCam launcher, and then select **Surveillance**.
  - select **Utilities > Surveillance** from the drop-down menu that appears at the top of most CyberLink YouCam windows.
2. Select the **Continuous recording** option and then enter the **Recording end time** in the fields provided.
3. Select **Start**. CyberLink YouCam begins to record the current webcam video.

---

*Note: CyberLink YouCam continues recording until the specified end time or when you select the **Stop** button.*

---

4. The captured video is placed in the captured content area, and saved to the capture folder specified in [Capture & Snapshot Settings](#). The video is also imported into the [YouCam Media Library](#).

---

**Note:** you can right-click on the captured video and select **Locate File on Disk** to view its saved location on your computer.

---

## Time-lapse Recording

When Time-lapse Recording is enabled, CyberLink YouCam takes a series of snapshots at specified intervals. These snapshots are then placed together in a video file, creating a video that uses time-lapse photography.

To enable a time-lapse recording, do this:

1. Do either of the following to access the Face Login window:
  - select the **Utilities** tab of the YouCam launcher, and then select **Surveillance**.
  - select **Utilities > Surveillance** from the drop-down menu that appears at the top of most CyberLink YouCam windows.
2. Select the **Time-lapse recording** option and then enter the **Recording end time** in the fields provided.
3. Enter in the amount of time between captures in the **Take a snapshot every** field.
4. Select **Start**. CyberLink YouCam begins to capture snapshots of the webcam video at the specified intervals.

---

**Note:** CyberLink YouCam continues recording until the specified end time or when you select the **Stop** button.

---

5. The outputted time-lapse photography video is placed in the captured content area, and saved to the capture folder specified in [Capture & Snapshot Settings](#). The video is also imported into the [YouCam Media Library](#).

---

**Note:** you can right-click on the captured video and select **Locate File on Disk** to view its saved location on your computer.

---

## Auto E-mailing Surveillance Videos

Once a surveillance video finishes recording, CyberLink YouCam can automatically e-mail\* the captured video to a specified e-mail address.

---

**Note:** \* this feature is not available in some versions of CyberLink YouCam.

---

To automatically e-mail a captured surveillance video, do this:

1. In Video Surveillance panel, select the **Auto e-mail** option to enable this feature and then select .
2. Enter in the e-mail settings information as follows:
  - **E-mail address:** enter in the e-mail address you want CyberLink YouCam to automatically e-mail the captured videos to.
  - **E-mail size:** select the maximum size for each e-mailed video file. If the file size exceeds the maximum selected, CyberLink YouCam splits the file into smaller video files before e-mailing.
  - **SMTP host:** enter in the mail server CyberLink YouCam can use to e-mail the video. Please consult your ISP provider for this information.
  - **Username:** enter the your e-mail username.
  - **Password:** enter your e-mail password.
  - **Capture folder:** select the folder where you want the e-mailed videos saved. Select  to change the specified folder if required.
3. Select **OK** to save the settings. CyberLink YouCam automatically e-mails a captured surveillance video to the specified e-mail address the next time it finishes capturing one.

## Face Login

The Face Login feature of CyberLink YouCam let's you use your face to log in to Windows and sign in to your favorite web sites\*.

---

*Note: \* this feature is not available in some versions of CyberLink YouCam.*

---

## Setting Up and Enabling Face Login

To set up and enable Face Login, do this:

---

*Note: Face Login is designed as a convenient tool to help you log into Windows and web sites quickly. It should not be used to protect your computer and personal information from unwanted access.*

---

1. Do either of the following to access the Face Login window:
  - select the **Utilities** tab of the YouCam launcher, and then select **Face Login**.

- select **Utilities > Face Login** from the drop-down menu that appears at the top of most CyberLink YouCam windows.
2. You will be prompted to enter your current Windows password. Enter it in the field provided, and then select **OK**. Be sure to select the **Remember my password** option so that you won't be prompted to enter it again.
3. Place your face in the center of the webcam image frame, and then select the  button. CyberLink YouCam will detect your face and capture an image it will use to log into Windows and web sites.

---

***Note:** if you previously enabled Face-out, CyberLink YouCam will use the same image. Select the **Show all faces** link if you want to view and remove any of the captured images of your face.*

---

4. If required, select the **Capture More** button to capture additional images of your face. CyberLink YouCam can capture up to 40 different images of your face. The more images you capture, the more accurate the face detection is when using Face Login feature.
5. Set the features of Face Login you want to enable as follows:
  - **Log in to Windows with my face:** select this feature if you want CyberLink YouCam to display the Face Login pop-up window when you are logging in to Windows\*\* on your computer. Once enabled, all you'll need to do is place your face in the center of the webcam image to log in.

---

***Note:** \*\* this feature is not supported on computers running under Windows XP.*

---

- **Sign in to web sites with my face:** select this feature if you want CyberLink YouCam to sign you in to web sites when your face is placed in a webcam image. See [Adding a Web Site to the Sign In List](#) for information on the steps to adding a new web site.

---

***Note:** the sign in to web sites feature only works when signing into web sites using Windows Internet Explorer 7 or above.*

---

- **Accuracy setting:** use the slider to set the accuracy CyberLink YouCam requires to confirm your face. If you set the slider to **High**, you will have to blink your eyes to log in.
6. Select **OK** to save the changes and enable Face Login. The next time you try to log in to Windows, or sign in to a web site, the Face Login pop-up window displays. Just place your face in the center of the webcam image to log in.

## Adding a Web Site to the Sign In List

Once you have enabled CyberLink YouCam to sign in to web sites\* in the settings window, do the following to add a web site to the Face Login Web Site List.

---

***Note:** the sign in to web sites feature only works when signing into web sites using Windows Internet Explorer 7 or above. \* This feature is not available in some versions of CyberLink YouCam.*

---

1. Go to the web site you want to add to the sign in list.
2. Sign in to the web site as you normally do with your username and password.

---

***Note:** if your web browser auto signs you in to the web site, you must sign out and then manually sign in again to add it to the list.*

---

3. Once you have successfully signed in, CyberLink YouCam displays the Face Login window. Set the information in the window as follows:
  - **Site name:** CyberLink YouCam auto fills this field with the name from the web site. If required, edit the site name so that it is easily identifiable in the web site list.
4. Select **Yes** to close the window and add the web site to the list.

---

***Note:** if you don't want add a web site to the list, select **Don't show this dialog again for this web site** and then the **No, Thanks** button.*

---

5. The next time you try to sign in to this web site, the Face Login pop-up window displays. Just place your face in the center of the webcam image to sign in.

## Managing Web Site List

You can manage the list of web sites that you have added to the Face Login Web Site List. CyberLink YouCam keeps track of both the web sites you want to log in to with your face, and those you chose not to include in the list.

To manage the Face Login Web Site List, do this:

1. Do either of the following to access the Face Login window:
  - select the **Utilities** tab of the YouCam launcher, and then select **Face Login**.

- select **Utilities > Face Login** from the drop-down menu that appears at the top of most CyberLink YouCam windows.
2. Select the **Manage Web Site List** button.
  3. If required, on the **Included Web Sites** tab, select a web site and then:
    -  to view information about the web site.
    -  if you want to remove the web site from the list. CyberLink YouCam will no longer prompt you when you try to sign into that web site.
  4. If required, on the **Excluded Web Sites** tab, select a web site and then  if you want to remove it from the list. CyberLink YouCam will prompt you the next you try to sign into that web site.
  5. Select **OK** to close the Face Login Web Site List.

## Editing Face Login Settings

To edit the Face Login settings, do this:

1. Do either of the following to access the Face Login window:
  - select the **Utilities** tab of the YouCam launcher, and then select **Face Login**.
  - select **Utilities > Face Login** from the drop-down menu that appears at the top of most CyberLink YouCam windows.
2. In the YouCam Face Login Settings window, edit the settings as follows:
  - select the **Capture More** button if you want CyberLink YouCam to capture another image of your face. CyberLink YouCam can capture up to 40 different images of your face.
  - deselect the **Log in to Windows with my face** item to disable the Face Login in feature when you log in to Windows. Once disabled, the Face Login pop-up window no longer displays when logging in.
  - deselect the **Sign in to web site with my face** item to disable the Face Login in feature when you sign in to web sites. Once disabled, the Face Login pop-up window no longer displays when you sign in to a web site.
  - select the **Manage Web Site List** button to view and edit the Face Login Web Site List. See [Managing Web Site List](#) for more information.

3. Select **OK** to save your changes.

## Face-out

The Face-out\* utility in CyberLink YouCam can auto protect your computer when your face exits the webcam image, by locking it, or by making it hibernate or sleep.

---

*Note: \*this feature is not available in some versions of CyberLink YouCam.*

---

## Setting Up and Enabling Face-out

To set up and enable Face-out, do this:

1. Do either of the following to access the Face-out window:
  - select the **Utilities** tab of the YouCam launcher, and then select **Face-out**.
  - select **Utilities > Face-out** from the drop-down menu that appears at the top of most CyberLink YouCam windows.
2. You will be prompted to enter your current Windows password. Enter it in the field provided, and then select **OK**. Be sure to select the **Remember my password** option so that you won't be prompted to enter it again.
3. Place your face in the center of the webcam image frame, and then select the **Capture** button. CyberLink YouCam will detect your face and capture an image it will use for Face-out.

---

*Note: if you previously enabled Face Login, CyberLink YouCam will use the same image. Select the **Show all faces** link if you want to view and remove any of the captured images of your face.*

---

4. If required, select the **Capture More** button to capture additional images of your face. CyberLink YouCam can capture up to 40 different images of your face. The more images you capture, the more accurate the face detection is when using the Face-out feature.
5. Set the features of Face-out you want to enable as follows:
  - **Enable Face-out when I am not in front of the PC:** select this feature if you want CyberLink YouCam to display a pop-up window when your face leaves your webcam's image. After the specified duration, CyberLink YouCam will perform the specified action to protect your computer.

- **Do the following action:** select whether you want CyberLink YouCam to lock Windows, or make your computer sleep or hibernate.
  - **Time before countdown:** specify the length of time you want CyberLink YouCam to wait before it prompts you and starts the countdown.
  - **Length of countdown:** specify length of time you want CyberLink YouCam to wait before it performs the specified action, i.e. lock Windows, turn the screen off, or make your computer sleep or hibernate.
  - **Accuracy setting:** use the slider to set the accuracy CyberLink YouCam requires to confirm your face.
6. Select **OK** to save your changes and enable Face-out.

---

**Note:** *to disable Face-out, just reenter Face-out settings and then deselect **Enable Face-out when I am not in front of the PC** item.*

---

## Chapter 11:

# Technical Support

This section contains technical support information. It includes all the information to find the answers you need to assist you. You may also find answers quickly by contacting your local distributor/dealer.

## Before Contacting Technical Support

Please take advantage of one of CyberLink's free technical support options:

- consult the user's guide or the online help installed with your program.
- refer to the Knowledge Base in the Support section of the CyberLink web site.

<http://www.cyberlink.com/support/index.html>

The FAQs may have information and helpful hints that are more current than the User Guide and online help.

When contacting technical support by email or phone, please have the following information ready:

- registered **product key** (your product key can be found on the software disc envelope, the box cover, or in the e-mail received after you purchased CyberLink products on the CyberLink store).
- the product name, version and build number, which generally can be found by clicking on the product name image on the user interface.
- the version of Windows installed on your system.
- hardware devices on your system (capture card, sound card, VGA card) and their specifications.
- the wording of any warning messages that were displayed (You may want to write this down or take a screen capture).
- a detailed description of the problem and under what circumstances it

occurred.

# Web Support

Solutions to your problems are available 24 hours a day at no cost on the CyberLink web sites:

---

**Note:** *you must first register as a member before using CyberLink web support.*

---

CyberLink provides a wide range of web support options, including FAQs, in the following languages:

Language	Web Support URL
English	<a href="http://www.cyberlink.com/support/index.html">http://www.cyberlink.com/support/index.html</a>
